

Energy for the Future:

Plugging the decline in energy supply, a gap too big?

Thursday 21st May 2015, 7:00 – 9:30pm
Lecture Theatre, Trinity Hall College, University of Cambridge

This panel discussion will ask: if an increased demand in energy and our limited resources will lead to a critical point in the future of our energy. Is there indeed decline in supply, or a question of an increase in global demand. Can we predict the future of energy and bring it to those who need it? The discussion will highlight the issues through; innovation, use of traditional and renewable energy sources, as well as smart technology.

Speakers

Iman Hill (Previous post: Vice President
Development and Production Africa, Sasol)
Oil and gas sector

Professor Jenny Nelson (Imperial College London)
Photovoltaic and Renewable Energy

Professor Clare Grey (University of Cambridge)
Energy Storage, Steering Committee of
Energy@Cambridge

Professor Sir Brian Heap
Smart Villages: Off-Grid Communities in Developing
Countries
